Summary

Backend-focused full-stack developer building scalable APIs, user activity tracking systems, and data-driven applications, with emphasis on backend architecture, data processing, and performance.

Education

Pranveer Singh Institute of Technology B.Tech in Computer Science and Engineering Percentage: 81.02%	2023 – 2027
B.L.M. Inter College (U.P. Board) Class XII Percentage: 87%	2021 – 2022
B.L.M. Inter College (U.P. Board) Class X Percentage: 84.83%	2019 – 2020

Technical Skills

Languages: JavaScript, Python, C++, Java (basics)
Backend: Node.js, Express, Socket.io, REST APIs
Frontend: React, HTML, CSS
Databases: PostgreSQL, MongoDB, Redis
Tools: Docker, Git, Linux
Concepts: DBMS, OOP, System Design, API Authentication, DSA, Computer Network

Projects

Open Up (Recommendation & Analytics System) Jan 2026 – Present
Bandit-based recommendations, Node.js, Redis, Socket.io, React, PostgreSQL (drizzle-orm)

- Microservices Architecture: Designed Node.js and FastAPI microservices, handling 1k+ concurrent requests with improved scalability and fault isolation
- ML Recommendation Engine: Built LinUCB-based recommendation system with Redis caching, delivering personalized results in under 100ms latency
- Advanced Frontend & UI: Developed React dashboard with Framer Motion and Socket.io, improving real-time interaction responsiveness by 40%
- DevOps & Security: Deployed Dockerized infrastructure with PostgreSQL, Redis, and JWT/OAuth, reducing setup time by 60% and improving security

Rabbit Hole Explorer (Knowledge Graph System) GitHub — Live Demo Nov 2025 – Jan 2026
Node.js, React, Redis, MongoDB

- Engineered a graph platform supporting 100+ nodes, improving content discovery efficiency by 35%
- Designed services for node generation, traversal, and ranking, handling 500+ queries per minute
- Implemented navigation tracking to analyze behavior patterns, improving recommendation relevance by 25%
- Integrated Redis caching, reducing response latency from 300ms to under 120ms

WeChat (Real-Time Chat System) GitHub — Live Demo Sep 2024 – Jan 2025
Node.js, Socket.io, React, MongoDB

- Built a real-time messaging platform using WebSockets for bidirectional communication with low latency
- Implemented authentication, private/group messaging, and persistent chat storage
- Designed logging mechanisms to track user sessions, message activity, and system events
- Structured backend to handle concurrent connections efficiently using event-driven architecture

Achievements

- Solved 1000+ problems on LeetCode and HackerRank, strengthening algorithmic thinking and problem-solving
- ICPC 2023 participant — solved problems under strict time and team constraints
- Smart India Hackathon 2025 participant — built a full-stack solution in a 36-hour hackathon

Certifications

Machine Learning Specialization — DeepLearning.AI
